

A Connected Population Health Solution

Delivered where your patients live work and play.

Population health should not start with an office visit. Population health requires data and analytics to identify at-risk patients and target services that reduce their use of expensive and low-quality care. Under a population health model, providers manage care—from preventive and maintenance care to acute and long-term care—for a defined population. Those who are most successful often deploy innovative delivery models; analyzing data and trends in a population's health, quality, and costs, and bearing financial risk. Value based payment contracts reward providers for successfully executing these processes.

The Creo mobile-first health platform and suite of services is a natural extension to your practice. Allow us to help you deliver a true population health program in a hyper-personalized way.

Improved Patient Activation & Engagement

- Improves patient health literacy
- Improves patient experience with healthcare
- Lowers per capita costs
- High impact to HEDIS, MIPS or PQRS scores
- Improved patient satisfaction & access
- Condition management and improvement through informed decisions

Patient Outreach Technology

- Integration with EMRs
- Predictive Analytics
- Mobile 1st Technology
- Disease Management Programs
- Remote Patient Monitoring
- Detailed reporting on outcomes & other quality metrics
- High patient touch points

Practice Enhancements

- Improved outcomes
- Improved metrics for all value based reimbursements
- Improved revenue
- Access to continual monitoring of HEDIS, ESCO, MIPS and other quality scores
- Health coaches - RD, DE, PharmD, RN, Clin Soc Workers, Exercise Physios
- Payer compliant documentation
